

Appendix C Technology Replacement Policy

LONGVIEW INDEPENDENT SCHOOL DISTRICT
2006 - 2008

The technology replacement policy has been implemented to provide proper support for district computers and to protect the current technology assets of the district. It defines a maximum ratio of technology devices to support staff and funding that allows for timely installations, maintenance and repair. These ratios are meant to be the maximum possible ratios. When the ratio is exceeded, new technology purchases must be replacements for older technology in an attempt to maintain or lower the ratio. When the replacement policy is in effect, the technology department will require the retiring device to be identified before implementing the new device.

As an alternative to computer replacement, licensing, maintenance and support fees can be purchased on a per computer per annum basis according to the current pricing guide available from the technology department.

Campus and departmental plans should address the replacement policy if necessary when planning new technology purchases.

All technology purchases regardless of funding source are subject to the policy when it is in effect.

Replacement Ratio for Computers: 500:1
Current Ratio: 675:1 **Replacement Policy is in Effect

Replacement Ratio for Printers: 250:1
Current Ratio: 223:1
